

Life Before Amplus

Kursk

Ian Herd and Stewart Risk managed a fast track underwater intervention associated with successful recovery of the Russian nuclear powered submarine, Kursk.

The DPDSV DSND Mayo provided saturation diving support for 5 months preparing the submarine for recovery. Extensive mitigation measures were implemented to protect from radiation and munitions risk.

Subsea Viking

Based on extensive knowledge gathered from installation of the BP Schiehallion field, the Subsea Viking was specified as an ROV construction support vessel and built to spec. This project involved the shared minds of Ian, Stewart and the Subsea Offshore construction team; resulting in successful operation on West of Shetland's construction and maintenance activities, over many years.

Integrated Subsea Services (ISS)

Ian Herd and Bruce Webster created ISS in 2002, to provide diving and ROV services to the offshore oil and gas industry. With the proposition of a flexible, high quality service matched with safety and operational efficiency; the company excelled at offering an alternative to the three main North Sea contractors at the time. The above was awarded in recognition for a 141% rise in sales: from £2.5m in 2003 to £34.8m in 2006. ISS was part of Harkand Group.
